# HELICOIL<sup>®</sup> machine taps

### straight fluted | For through holes

Type 0141.1 HELICOIL<sup>®</sup> machine tap to create holding threads for HELICOIL<sup>®</sup> thread inserts with British Association Standard Threads (BA) as per NASM33537. The tap is suited for through holes and blind holes with a deeper tap hole.

#### **Properties:**

- Straight-fluted
- Without spiral point
- 2-pitch chamfer
- 10 % cutting angle
- For materials with 850 N/mm<sup>2</sup> strength max.
- Tolerance class 2B

Technical information can be found on the last page.

## HELICOIL® Plus thread inserts

W and  $d_1$  are the control values for thread inserts (Free Running and Screwlock) before they have been installed. The length can only be measured for installed thread inserts.

Prior to tapping, counter-bore 90° and deburr. Outside diameter of **countersink** =  $D_{HC}$  + 0.1 mm.

- d = Nominal thread diameter
- P = Thread pitch
- $d_1 \quad = \mbox{ Outside diameter of thread insert prior to installation} \\$
- W = Number of threads prior to installation
- $D_{HC}$  = Outside diameter of the parent thread
- $D_{1HC}$  = Crest diameter
  - = Suitable twist drill diameter. Please note:  $D_{1HC}$  is critical for selecting the correct twist drill diameter.
- $t_1$  = Minimum depth of tapped hole according to DIN 76 Part 1 (guide value)
  - = The nominal length of the thread insert corresponds to the minimum length of the full parent thread for blind holes or the minimum plate thickness for a through hole.
  - = Maximum screw-in depth when the tang is not removed
  - Distance of the thread insert from the joint face = 0.25 to 0.5 P, if t<sub>2</sub> corresponds to the abovementioned minimum value

When you use HELICOIL® Plus thread inserts for volume production, we recommend to add at least 1 x P to values  $t_1$  and  $t_2.$
